PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student at PDA College of Engineering, graduating in 2027, seeking a software development or full-stack fresher role. Project experience includes frontend and database development for a PHP/MySQL job portal and feature development for a deep-learning-based image classification application. Interested in building practical, user-focused software and continuing to grow in web and backend development.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, PHP

Frontend Development: HTML, CSS, React, Next.js, Gradio

Databases: MySQL, SQL, relational database concepts

AI / Machine Learning: TensorFlow, Keras, VGG16, Grad-CAM, OpenCV, Pillow, NumPy, Pandas, scikit-learn

Tools & Testing: Git, GitHub

Computer Science Fundamentals: Data Structures, DBMS, Operating Systems, Computer Networks, System architecture

Additional Exposure: IoT, Retrieval-Augmented Generation (RAG), Ollama, IndicTrans2

PROJECTS

Job Portal Management System | HTML, CSS, PHP, MySQL

- Developed and refined user-facing pages using HTML and CSS, focusing on clear navigation and usable job-seeker workflows.
- Handled a major share of the MySQL database work, organizing data for job listings, user information, and job applications.
- Worked with PHP-backed pages for database-connected workflows; primary contributions were frontend implementation and database work.

WBC Classification System with Explainable AI | Python, TensorFlow, Keras, VGG16, Gradio, Grad-CAM

- Integrated a trained VGG16-based white blood cell classification model into a user-facing application built with Gradio.
- Developed the frontend and added batch mode to process multiple images in a single workflow.
- Implemented Grad-CAM visualizations to show image regions influencing model predictions.
- Added PDF report generation and image-processing support using Python libraries including OpenCV, Pillow, and NumPy.

ClaimSaarthi — Regulatory-Grounded Question Answering

- Explored a regulatory question-answering workflow using Retrieval-Augmented Generation (RAG) and clause-aware document chunking.
- Project work included discussion of local LLM inference with Ollama and multilingual processing with IndicTrans2; keep only if you can explain your own contribution.

EDUCATION

B.E. Computer Science Engineering | PDA College of Engineering | [2027]

Diploma - Information Science | Government Polytechnic, Gulbarga | [2024]

SSLC / 10th Standard [Shri Sardar Vallabhabhai Patel High School] | [2021]

CERTIFICATIONS

- Introduction to Large Language Models (LLMs)
- Human-Computer Interaction

RELEVANT COURSEWORK

Data Structures, Database Management Systems, Operating Systems, Software Engineering
